

## Features

- Incombustible acc. To DIN 4102 A2 / B1
- non-cling of Gunpowder
- weather resistant
- highest or optimum absorption of reverberation (absorption capacity)
- high noise proving levels of approx. 18 dB at 50mm and 30 dB (A) at 100mm
- no health risk, no hazardous substances  
Or respirable fine dust

**All systems are designed for easy install by Club members using our assembly drawings!**

Absorption diagramm for webra®-acoustical Baffles & panels.

**100 % - Quality made in Germany**

## Our Service

We offer economically-priced consulting, forecasting, noise measurement and professional assessments. webra® has been operating successfully in the field of silencing of industrial noise for more than 20 years.

Make use of our Experience! We will assist you with our level best to find the solution for your noise problem!

## Fax-reply

- I would like to be given expert advice
- I would like more detailed written info

## Hanging Acoustical Baffles

One special feature is the **webra®-suspended noise absorption system**. Developed mainly with open shooting galleries in mind, this system brings about significant reductions of the shooting noise level in the moment if the impact. Compared with fully covered galleries, systems using these **absorbers allow air and light to enter and slash costs by doing away with the need for expensive ventilation-systems** and illumination-systems - the running costs they entail.

Using webra®-suspended noise absorption systems outdoor measurements show reductions in noise of **up to 20 dB (A) are possible**.

## Reducing reverberation times in your galleries

**Up to 9 dB (A) noise level reduction...**  
 ...is possible if your rooms are optimally insulated using webra® noise abatement panelling for walls & ceilings. webra®-noise abatement panels can be fitted directly – In other words with no cavity. Our webra® noise abatement panels have an established track record of success in muffling noise in indoor & outdoor areas since 1980.
